MGH Medical Records

Mrs. HENDREN was diagnosed with a T2N1M0 right-sided breast cancer. She underwent a goldilocks mastectomy with axillary node dissection and just completed an adjuvant course of radiation therapy. After a long discussion with her, she received the following radiotherapy treatment:

Plan 1:

Treatment volume: Right supraclavicular nodes Dose and fractionation: 40 Gy in 16 fractions

Energy: 6 and 18 MV

Treatment start date: July 3rd 2014

Treatment completion date: July 24th 2014

Treatment related toxicities:

Dermatitis: Grade 1

Other issues arising during treatment: none

Impression and Plan: This patient tolerated therapy with mild acute side effects. The patient was given instructions to return to our clinic for routine evaluation in 3 months.
